SUMMARY

Backend & AI developer in the AI Department of Ipotekabank (OTP Group). I build Python/FastAPI microservices for internal banking and AI systems, integrate LLMs through RAG pipelines and MCP services, and own the delivery side: Docker, GitLab CI/CD, HashiCorp Vault and automated testing. Backend developer since 2024.

EXPERIENCE

Ipotekabank (OTP Group) — AI Department, Process Optimization Directorate — Aug 2026 – Present
Backend & AI Developer

- Develop Python/FastAPI microservices and REST APIs for internal banking and AI systems.
- Build RAG and MCP integrations that connect LLMs to internal documents, services and external APIs.
- Implement asynchronous processing with Celery + Redis; work with PostgreSQL, Redis and MinIO.
- Migrated secrets of several microservices from .env files to HashiCorp Vault (Vault Agent, Docker).
- Configure GitLab CI/CD pipelines and deployments across dev and staging; publish images to Nexus.
- Maintain Alembic migrations, OpenAPI/ReDoc documentation and pytest test suites.

UzEngineering — Sep 2024 – Feb 2025
Backend Developer (Python)

- Developed and maintained Python backend services and REST APIs, including AI-based automation features.
- Debugged production issues and optimized server-side logic and database queries in a Git-based team workflow.

PROJECTS AT IPOTEKABANK

AI Recruiting Assistant — MCP service · Python, FastAPI, MCP, Vault

- MCP service that gives LLM agents access to the bank's HR/recruiting data and external APIs; moved its secrets to Vault.

Document Sync & RAG Indexing Service · FastAPI, Celery, Redis, PostgreSQL

- Synchronizes and indexes documents between internal services and RAG knowledge bases so AI assistants answer from up-to-date data; migrated configuration to Vault.

AI Test Builder · Python, Docker, GitLab CI/CD, Vault

- Integrated the AI-powered test-building platform with the bank's internal MetaDesk platform, connected Vault and deployed it to the dev environment.

Storage Service · FastAPI, MinIO, OpenAPI/ReDoc

- File storage microservice; built static ReDoc API documentation used by consuming teams.

AI Document Agent — release to staging · GitLab CI/CD, Docker

- Prepared and rolled out the current dev version of an AI document-processing service to the staging (pre-production) environment.

Git Secrets Audit · Git, security

- Audited the full commit history of the team's services for leaked secrets and tokens and cleaned them up.

PERSONAL PROJECTS

FinCore — Microservices Payment Platform — github.com/kadirovhabibjon/FinCore

- 8 services with database-per-service; double-entry ledger, sagas, transactional outbox with Kafka, JWT/JWKS auth.
- 48 end-to-end tests in CI; observability with Jaeger, Prometheus and Grafana; React + TypeScript admin panel.

KitobHub — Microservices Bookstore — github.com/kadirovhabibjon/KitobHub

- FastAPI services behind an NGINX gateway, Redis caching, Kafka events, React frontend, GitHub Actions CI.

EDUCATION

Tashkent Institute of Chemical Technology — Bachelor's in Management (part-time), Faculty of Industrial Engineering and Management — Expected 2029

School 21 — Software Engineering Program: C, algorithms, Unix/Linux, SQL, Python — 2025 – 2026

SKILLS

Languages: Python, SQL, C
Backend: FastAPI, Django, DRF, SQLAlchemy, Alembic, Celery, REST APIs, webhooks, microservices
Data: PostgreSQL, MySQL, MongoDB, Redis, Kafka, MinIO
DevOps: Docker, Docker Compose, GitLab CI/CD, GitHub Actions, Linux, Nginx, HashiCorp Vault, Nexus
AI: LLM APIs, RAG, MCP, LiteLLM, Langfuse
Spoken: Uzbek (native), English (C1), Russian (B2)
